World Premiere for PCD Grinding

LACH-DIAMANT has enlarged their already existing range of automatic precision tool grinding machines with the introduction of the "pcd-100" universal precision steel grinding machine.

It bridges the gap between one-off and serial production in the grinding of single edged cutting tools made of the cutting material HSS, carbide, ceramic, diamond (PCD) and/or boronitride (PCB).

This grinding machine can be used for wet or dry grinding. Tapered edges can also be ground without any difficulties using the inclinable grinding spindle.

Key No. 26865
