## **Proven Diamond Tools For Wood**

In 1979 the diamond manufacturer Lach-Diamant presented the diamond tool for the economic processing of all wood and wood-like materials to an astonished group of customers.

Today in 2001, indeed 22 years later, the diamond tool has a market share of 950 Million DM in the industry as a processing tool. This is the newest finding according to publications in the wood-working in-

dustry. In the next four years the consumption of diamond tools will even be doubled according to this analysis.

At the LIGNA 2001 in Hanover the company showed next to the proven diamond tools for the wood, plastic and aluminum processing industry, such as furniture, laminate floors and automobile industry newly developed sharpening and manufacturing technologies for such diamond tools which will improve our life today and in the future.
