## Optimize Tool Management with Convenient Tool Crib

In addition to manufacturing polycrystalline-diamond (PCD) cutting and grinding tools, **Lach Diamant** offers such accessory products as lapping and polishing compounds, tool-grinding and -sharpening machines

and tool management systems. The company has lately added to its tool management line the **Starter Tool-Box tool crib**, an innovation designed to optimize tool administration.

Advantages of the new crib include easy handling by users, systematic tool storage and, especially, effective inventory control, which ultimately results in lower costs for tool procurement and for the tools themselves.

The Starter ToolBox tool management system can be configured to store a variety of tools or tools from different suppliers. It is designed to facilitate retrieval of the desired tools.
