Applying Diamond Paste as an Aerosol Spray Facilitates Lapping and Polishing of Tooling

Diamond technology has many uses in the tool and mould mak-

sing industry, and, says **Lach Diamant**, is virtually indispensable for certain operations. Lapping and polishing provides an example. Here, even when electrical discharge machining is the technique employed, machining has to be supplemented with the use of diamond paste. Lach Diamant's **MF spray diamond paste** is engineered to promote faster lapping and pol-

ishing. The aerosol spray is available in diamond grit sizes of 1/4 to 90.

The economical spray, which has long been proven in use, saves mould makers the cumbersome effort of dispersing and thinning the diamond paste. For this reason, it is particularly recommended for lapping and polishing large-area surfaces.
