16 AEROSPACE MANUFACTURING | MARCH 2011

EVENT PREVIEW | JEC COMPOSITES PARIS

Leading provider of diamond tools

for milling, drilling, cutting and deburring, Lach Diamant (**stand J64**), will be exhibiting carbide-superior polycrystalline cutting tools (PCD) and diamond tools with electroplated bond for the processing of all composite fibre materials. In addition, its new 'Cool Injection' direct cooling for PCD milling cutters and step drills will be presented for the first time. With Cool Injection, the coolant (liquid or air) reaches the cutting edge directly through the surface of the PCD tip so that hot chips being produced are fractured abruptly by the targeted coolant stream and can be disposed of immediately.

Lach Diamant's PCD drills: Available from 1-100mm diameter
