

NEW PRODUCTS AND PRESS RELEASES

EACH DIAMOND presents newly developed Diamond Jointing Cutters for the „Laser Edge“ at the LIGNA in Hannover.

March 17, 2010

The Laser has made its entry in furniture manufacturing and has brought a change in the nature of the industry and even this of skilled people.

Precision in manufacturing as well as in furniture manufacturing, its connection with the customer design and furniture brand and more the building element.

It is not surprising that the up to now precision-free edge leveling is being replaced by the level and flat for the „Laser Edge“. This has been the different edge materials directly, without a further joint and the completion of the respective wood material, glass or a (DIN) joint.

From this technology and the new system type of surface settings on different cut-off planes and changed the requirements of LIGNA EXHIBITION to develop a superlative and prepare for the processing of the „Laser Edge“.

This innovation was supported by the 40 years of processing work of LIGNA EXHIBITION for processing, development and application of PCT tools, such as cutting tools with polycrystalline diamond cutting edges in the industry.

For the first time there is LIGNA, the diamond jointing „cutters-hatched“ are equipped with a special cutting geometry and seven fixed angles.

A so-called „flat surface“ at the end of the production process cutting edges guarantee superior cutting quality and long service life.

Thus the newly developed diamond cutters meet the highest demands and offer the best perspective for the „Laser Edge“, as the standard in the ultra-furniture industry.

The newly developed diamond jointing cutter „hatched“ for the „Laser Edge“ of LIGNA EXHIBITION is built on extremely high quality and built on the highest production technology.

More open about all the necessary processing work of LIGNA EXHIBITION.
