

GRINDING SOLUTIONS

LACH DIAMANT presents world debut at GrindTec

drebojet®-plus precision dressing rolls (patent pending) are the advanced and perfected version of the drebojet dressing roll introduced at EMO in 1981. At the time, this new development established a new milling technique in the industry. drebojet dressing rolls from the pioneer times of the early eighties, were at first

produced with chip chambers or gaps from "tooth-to-tooth," much like PCD milling tools. This design led to unacceptable "chatter marks" during the dressing process, but thanks to modern technologies and advanced know-how, these "gaps" can now be eliminated.

Compared to other conventional or ceramic diamond and CBN grinding wheels drebojet-plus precision dressing rolls do not need any sharpening or regrinding.

PCD grinding for all diamond tools for processing wood and plastics

The »Dia-220Q-mini« is one of the most successful product designs which reflects LACH DIAMANT's 35 years of experience in building automatic grinding machines for tool grinding and tool manufacturing. It also features an unrivaled price-performance ratio.

Several user-friendly programs are available, for example shank cutters or jointing cutters (with or without axis angle), scoring saws or even saws (max. \varnothing 400/480 mm) and multiple production processes within one setting.

The »Dia-2200-mini« should be a standard asset of any service operation, especially when time is of the utmost importance and customers are waiting.

If you were unable to attend the recent GrindTec show and visit the LACH DIAMANT stand, it is still possible to visit the manufacturer's headquarters in Hanau/Main.
