## CHIP BREAKERS SUITED FOR BOTH ROUGH MACHINING, FINE FINISHING

LACH DIAMANT, BOOTH D41

Lach Diamant will demonstrate its PCD IC-Plus chip breakers, which the company says perform well during both rough machining and fine finishing when using long-chipping-aluminum alloys. The chip breakers can guide chips with a cutting depth of 0.01 mm, and the cutting depth can be increased as high as the maximum length of the cutting edge.
